

Technical Data Sheet

Professional spotting agent that can be used for both pre-spotting and post-spotting

- › For stains such as rust and other metal oxidation stains
- › New formulation for improved safety for the user

Stains usually contain several components, so it often it is necessary to use several products for complete stain removal. If in doubt about the composition of the stain start with D4 – Protein and no steam to avoid fixing protein stains

Technical Data Sheet

Method of use:

For unidentified stains please refer to the D-line spotting table for the correct sequence of spotting agent to avoid fixing any protein stains.

For identified stains:

- 1) wet the stain to be treated
- 2) apply the product undiluted drop-wise onto the stain
- 3) allow the product to work for 15-30 seconds, gently using a brush or spatula if necessary
- 4) heat with steam gun if required
- 5) rinse completely with water and dry with compressed air.
- 6) repeat the treatment as necessary

pH = acidic

Ionicity: non-ionic

D2 - Rust
