

Technical Data Sheet

Professional spotting agent for pre-spotting

- For stains such as blood, egg, milk, ice cream etc.
- Enzymatic formulation to rapidly break-down stains

Stains usually contain several components, so it often it is necessary to use several products for complete stain removal. If in doubt about the composition of the stain start with D4 – Protein and no steam to avoid fixing protein stains

D4 – Protein

Technical Data Sheet

Method of use:

For unidentified stains please refer to the D-line spotting table for the correct sequence of spotting agents to avoid fixing protein stains.

For identified stains:

- 1) apply the product undiluted drop-wise onto the stain
- 2) allow the product to work for 5-10 minutes, gently using a brush or spatula if necessary
- 3) rinse completely with water and dry with compressed air.
- 4) repeat the treatment as necessary

pH = alkaline

Ionicity: anionic, non-ionic

D4 - Protein
